

# Little lids are like little kids, they will get lost if they're not with their parent (material)

## Steel lids (magnetic)

**Collect steel lids inside of a steel can.** Once the can is 3/4 full, crush the top of the can to **close it shut**. Then place in your yellow bin. At the MRF, Magnets will then collect the can (and lids) for recycling into new metal products.

## Aluminium/foil lids (non-magnetic)

**Collect foil lids together and wrap in used aluminium foil,** or place inside a foil tray. **Scrunch together** into a fist sized ball, then place it in your yellow bin. At the MRF, an eddy current will separate and collect the aluminium items for recycling into new aluminium products.

## Plastic lids

**Leave lids on plastic bottles.** Firstly ensure all liquids are emptied from the bottle, flatten to allow for more room in your recycle bin, then replace the lid. Plastic bottles and lids will be separated for recycling at the recycling facility.
